The MSc programme in Organic Agriculture and Food Systems (EUR-Organic) is a unique degree combining high-ranking research environments with state-of-the-art knowledge from industry leaders in organic food production. It prepares students to develop the solutions of tomorrow, focusing on goals such as high crop yields, high animal welfare, and low environmental impact. Students also learn how agriculture systems and current methods of food production work. At Aarhus University organic agriculture is an integrated part of all courses, and therefore the programme for students specialising in organic agriculture also includes courses focused on farming in an organic setting.

AN INTERNATIONAL DOUBLE DEGREE
This programme is a collaboration between four leading European universities in the field of agriculture and life sciences (Aarhus University, the University of Hohenheim in Stuttgart, the University of Natural Resources and Life Science in Vienna, and the Warsaw University of Life Sciences).

Students spend one year at their chosen home university and one year at their chosen host university, and receive a degree from both institutions. Each university takes a different thematic approach to organic food production, with Aarhus University’s specialisms including organic agriculture with a focus on animal or plant production, health, and welfare/nutrition.

For detailed information on each university’s specialisms, visit www.eur-organic.eu.

AN IDEAL STUDY ENVIRONMENT
Denmark is a world leader in organic food production, which provides the ideal setting for specialising in this field. The Danish government was one of the first to prioritise organic production, and an increasingly high percentage of food produced in Denmark today is organic.

This programme gives students an international profile, network, and perspective. Students will be exposed to differing parameters in different countries and agriculture systems around the world, and they will learn from their peers’ different ways of approaching a problem – a perfect preparation for a future career in an increasingly globalised industry.

CAREER PROFILE
Graduates can choose from a wide range of careers in supporting organic farming development. Recent graduates have worked in research and in primary production with national, regional, and local authorities and advisory services.

JULIA GAJO
MSc in Organic Agriculture and Food Systems
Plant cultivation consultant, Sønderjysk Landboforening

My academic experience in Denmark was a lot of free studying with group work and reports. I think this is a good thing, because it makes you more self-reliant and prepares you for your work life. With a double degree you go abroad for a whole year, which gives you an opportunity to get into another culture.

MSC IN ORGANIC AGRICULTURE AND FOOD SYSTEMS*
AGROBIOLOGY DOUBLE DEGREE

ADMISSION REQUIREMENTS
Admission to the double degree programme in Agrobiology at Aarhus University requires a relevant bachelor’s degree within the field of life science such as plant, animal, or veterinary science. Detailed admissions requirements and more information about the programme are available at [www.eur-organic.eu](http://www.eur-organic.eu).

SELECTION CRITERIA
As the Master’s programme admits only a limited number of students each year, meeting the admission requirements does not in itself guarantee admission to the programme. Student places are allocated on the basis of an overall assessment. In evaluating qualified applicants, the admissions committee assesses applicants according to the following criteria: academic background; overall grade level of bachelor’s degree; grades achieved on relevant courses; and relevant courses (measured in credit units) included in the bachelor’s degree.

Relevant courses include core courses within the subject areas of agrobiology, chemistry, biochemistry, cytology, zoology, botany, mathematics, statistics, and probability calculus.

A WORLD RESEARCH LEADER
Aarhus University’s research in Agricultural Sciences is cutting-edge and puts it in the front rank of agricultural science institutions worldwide. The core areas of research are: climate and natural resources, environment and bioenergy, organic farming, food quality, farm animal production, and plant production.

Sustainability is a fundamental principle. The goal is to seek solutions that contribute to environmentally and economically sustainable development of the agricultural and food industries.

IN THE RANKINGS
Agricultural sciences at Aarhus University rank ninth worldwide in the 2017 US News Best Global Universities ranking, and tenth in the 2016 National Taiwan University ranking. Agriculture and Forestry at AU are ranked between 51 and 100 in the QS World University Rankings by Subject 2017.
