

AARHUS UNIVERSITET

OPEN ACCESS AT AARHUS UNIVERSITY

*Make your publications
visible and accessible on the web*

OPEN ACCESS (OA)

Open Access is an important tool that allows you to make your scholarly publications more visible and accessible online

Open Access is about free and direct access to scholarly information. Open Access to a publication means that it is freely accessible on the web.

At Aarhus University you can create open and direct access to your publications by uploading them as full texts in PURE. This folder describes how. When a publication is uploaded, it will be displayed on the researcher's personal website, while at the same time being harvested by Google and other search engines.

Aarhus University recommends that all its researchers make their publications available via Open Access. Aarhus University has opted for Green Open Access.

This model does not influence the peer review process in any way and does not preclude publication in a journal. What is new is that concurrently with publication, access is ensured to either a preprint or postprint version of the article. Open Access is therefore a supplement to traditional publication in journals and books.

It is also possible to upload works which are not usually published. Open Access can thus contribute to drawing attention to scholarly production which is otherwise not published. For example, the university recommends that you upload your PhD thesis.

WHY MAKE YOUR PUBLICATIONS AVAILABLE AS OPEN ACCESS?

THE ADVANTAGES OF PROVIDING FULL-TEXT ACCESS TO YOUR RESEARCH ARE MANY

- Your publications can be read sooner as the traditional publication process often takes a long time.
- Your publications will reach a wider audience as Open Access requires no subscription to journals.
- Recognition of your work will increase thanks to Aarhus University's involvement in Danish and international networks.
- Scholarly publications in the universities' electronic repositories may enjoy a citation advantage. The extent to which this is the case varies from one academic field to another.
- Your personal website will be updated when you register your publications, with links being provided from the registrations to full-text versions.
- You contribute to an attractive research environment.

INTERNATIONAL AWARENESS OF OPEN ACCESS

Internationally, foundations and research councils are increasingly recommending that research findings be made available via Open Access or even make funding conditional upon Open Access publication. For example, the European Research Council recommends that research funded by the EU be made available via Open Access.

PROFESSOR
CARSTEN TANGGAARD
SAYS

“Open Access is an important instrument in the democratisation of access to knowledge. Universities are funded by society, and we should be paying society back by making our research publicly available. Open Access is also important because it counteracts the trend towards the monopolisation and commercialisation of knowledge.”

Open Access gives access to research results prior to journal publication. This is particularly important within the social sciences, where the process from the first version of an article until final publication can be very long – often taking years.”

PROFESSOR
JENS CHRISTIAN DJURHUUS, DR.MED.,
SAYS

“As head of the Institute of Clinical Medicine, I must recommend the Open Access initiative. It should, of course, be balanced with a desire to continue to use the usual publication channels.

However, a lot of scholarly work is produced and never published. Pregraduate research student theses and PhD theses have a difficult time of it in the conventional publication system. In so far as it does not prevent the publication of

original works, making these theses much more widely available to the research community is thus of tremendous importance. Moreover, they may pave the way for far more up-to-date teaching than any activities based solely on textbooks.

I am therefore fully in favour of Aarhus University’s initiative.”

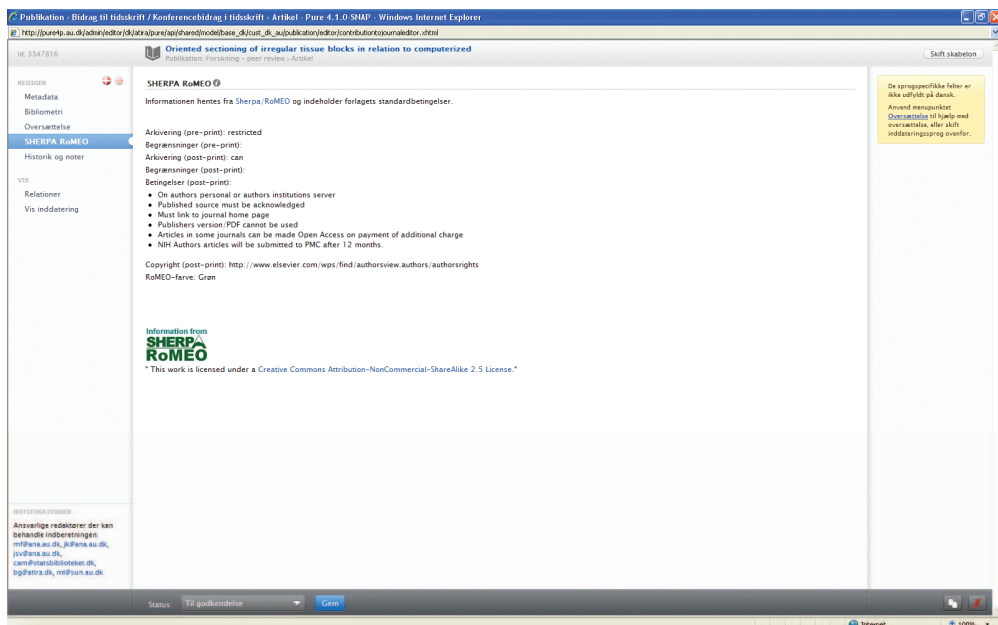

FULL-TEXT FILES ARE ATTACHED VIA **PURE**. HOW DO YOU DO IT?

When registering your research in PURE, you can supplement the bibliographical data with a digital version of your publications. You can also attach files with data, images, sound etc.

You attach your full-text file to your registration by selecting “*Add document*” under “*Documents and links*”.

If you want to attach an article published in an English-language journal, you will in many cases be able to obtain information about the journal's Open Access policy from SHERPA-RoMEO. Activating SHERPA-RoMEO in the left-hand margin will provide information about the journal in question.

By attaching a full-text file to your PURE registration, you are at the same time ensuring central archiving of your research.

AARHUS UNIVERSITY SUPPORTS OPEN ACCESS

Aarhus University recommends that “the university’s research scientists and scholars ensure free accessibility to scholarly publications. The university therefore supports the Open Access initiative, which will both lead to more effective use of the university’s many scholarly publications and also strengthen the university’s international position and impact.”

COPYRIGHT AND SCHOLARLY PUBLICATIONS

In connection with Open Access publication, you must be aware of copyright issues. Firstly, you must respect the rights of other copyright holders, and secondly, you should be aware of possibilities for Open Access when negotiating contracts with publishers.

Many publishers allow you to deposit your publications in institutional repositories. On the website: *SHERPA/RoMEO Home – Publisher copyright policies & self-archiving*, which you will also find in connection with PURE registration, you can read more about the policies of individual publishers.

In other cases, special agreements can be made with the publishers. Remember that unless otherwise agreed, you as the author hold the copyright to your work.

VISIT THE UNIVERSITY’S WEBSITE ON OPEN ACCESS

On the university website (<http://medarbejdere.au.dk/openaccess>) you can read more about Open Access and who to contact if you have any queries.
