

Phishing

— take a deep breath before you click

Scammers use phishing to trick you into disclosing confidential information or sending money by creating fraudulent emails, websites, texts or phone calls.

5 tips

1. Be careful about clicking links in unsolicited emails and text messages.
2. Check the sender's address or telephone number.
3. Hover your cursor over links to see where they really lead.
4. Never share your passwords.
5. Turn off your autopilot and think twice before you click.
